Introduction to Braille and Bharati Braille

Persons with visual impairment use Braille code for reading and writing with the help of traditional and modern devices. Braille is a script of raised dots. Persons with visual impairment read by moving their fingertips over the lines of embossed Braille dots.

Louis Braille, a French educator and inventor, developed the revolutionary tactile writing system known as Braille. Born in 1809, Louis Braille lost his sight at a young age due to an accident. Despite his blindness, he excelled in academics and sought to create a better method for the visually impaired to read and write. Drawing inspiration from a military code used for silent communication, he developed the Braille system only at the age of 15. This system uses patterns of raised dots to represent letters, numbers, and punctuation, allowing blind and visually impaired individuals to read through touch. The Braille system has become a fundamental tool for accessibility and literacy for people with visual impairments worldwide.

To begin with, it is essential to understand that Braille is a code and not an independent language. Each letter or the alphabet is represented by a unique Braille character. It is fitting to highlight the key features of this system. The Braille system is constructed from six raised dots arranged in two vertical lines in rectangular spaces known as Braille cells. Each combination of dots and blank spaces occupies a cell. The six dots are organized in two columns (three dots in each vertical column) to form the Braille cell. To assist in identifying the positions of dots that form various Braille characters, the dot positions in a cell are numbered: Dots 1, 2, and 3 are downward on the left, while Dots 4, 5, and 6 are downward on the right.

The Braille cells are the fundamental building block of Braille system. These 6 dots of the Braille cell forms 63 different combinations and represents different letters, symbols or characters. For the sake of symmetry and ease of learning, Louis Braille grouped the 63 symbols in symmetrical 7 lines. In the long run this arrangement of 7 lines evoked more controversy of modifying, re-modifying the script later on as long as it was not universally accepted.

The first line consists of ten symbols formed of top four dots one two, four, five (⠠).

1	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠
---	---	---	---	---	---	---	---	---	---	---

Dot three (⠡) is added to each symbol of the first line serially to make the second line.

2	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠
---	---	---	---	---	---	---	---	---	---	---

Line three is formed by serially adding dot number three and six (⠠⠠) to the each symbol of the first line.

3	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠
---	---	---	---	---	---	---	---	---	---	---

Dot six (⠠⠠) is serially added to the each character of the first line for making fourth line.

4	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠
---	---	---	---	---	---	---	---	---	---	---

Line number five repeats the characters of the first line in the lower position of the cell using dot number two, three, five, six (⠠⠠).

5	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠
---	---	---	---	---	---	---	---	---	---	---

Sixth line consists of six symbols which is obtained by making Braille combinations of dots out of the dot number three, four, five, six (⠠⠠).

6	⠠	⠠	⠠	⠠	⠠	⠠
---	---	---	---	---	---	---

Line seven comprising seven characters formed by dot number four, five, six (⠠⠠).

7	⠠	⠠	⠠	⠠	⠠	⠠	⠠
---	---	---	---	---	---	---	---

Braille Grades

Braille comes in a variety of “grades” and variations. There are three grades of braille:

- **Grade 1:-** Braille Grade 1 consists of the Braille alphabet, numbers, and punctuation, which correspond directly to their printed counterparts.
- **Grade 2:-** Grade 2 Braille includes the same letters and punctuation as Grade 1, along with contractions and abbreviations for frequently used words and letter combinations. These contractions help in saving space and time. Grade 2 also speed up the process of reading and writing in Braille. Most Braille materials, such as books and other documents are written in Grade 2 Braille. These abbreviations are also employed to minimize the amount of paper required for printing/embossing Braille

books and to simplify the reading process.

- **Grade 3:-** Grade 3 Braille is mainly used for personal correspondence, diaries, and notes. It functions as a form of shorthand where whole words are abbreviated to just a few letters.

Braille English Alphabets

a ⠁	f ⠋	k ⠅	p ⠞	u ⠥	z ⠵
b ⠃	g ⠝	l ⠇	q ⠒	v ⠶	
c ⠉	h ⠈	m ⠍	r ⠞	w ⠺	
d ⠙	i ⠊	n ⠝	s ⠎	x ⠭	
e ⠑	j ⠛	o ⠥	t ⠞	y ⠽	

After assigning symbols (63 Braille combinations of dots) to the letters of alphabets, remaining characters are used for punctuations and contractions. The same process is being adopted in case of Indian languages.

Numbers in Braille:

- Cardinal numbers are represented by the letters of the first line (a, b, c, d, e, f, g, h, i, j) preceded by a numeric sign which represented by dot number Three, Four, Five, And Six (3456) (⠼):

Print Number Symbols	Braille Number Symbols
1.	⠼⠁
2.	⠼⠃
3.	⠼⠉
4.	⠼⠙
5.	⠼⠑
6.	⠼⠓
7.	⠼⠕
8.	⠼⠗
9.	⠼⠚
0.	⠼⠠

For example, 107 should be written in Braille as ⠼⠼⠠⠼⠏

- The numbers joined by the Hyphen (Braille dot 36) do not require a second numeral sign, until the Hyphen occurs at the end of a Braille line in which case figure/figures carried over must be preceded by the numeral signs.
- Ordinal numbers are formed by adding proper endings to the cardinal numbers. The mathematical comma (,) in Braille is represented by Dot 2 (1). Roman numerals should be preceded by the letter sign Dot 56 (:).
- The decimal point (.) is represented by the Braille sign Dot 46 (:). When a decimal fraction is connected to a whole number, the number sign Dot 3456 (::) is placed only before the whole number.

Punctuations in Braille:

Punctuations	Print Symbols	Braille Dots
apostrophe	'	⠠
oblique stroke	/	⠢
Square bracket opening	[	⠶
Square bracket closing	]	⠷
colon	:	⠠⠠
Comma	,	⠠
dash	--	⠠⠠
double dash	----	⠠⠠⠠⠠
ellipsis	...	⠠⠠⠠
exclamation mark	!	⠠
hyphen	-	⠠
parenthesis, opening	(	⠠
parenthesis, closing	)	⠠
period/fullstop	.	⠠
question mark	?	⠠
quotation mark, double opening	“	⠠
quotation mark, double closing	”	⠠
quotation mark, inner opening	‘	⠠⠠

quotation mark, inner closing	'	⠠⠠
semicolon	;	⠠⠨

Bharati Braille

Bharati Braille is the Braille script used for writing the languages of India. It was developed to standardize the various Braille scripts that were in use across the country before India's independence. Before India's independence, there were eleven different Braille scripts in use for various Indian languages. This diversity made it challenging for visually impaired individuals to communicate and learn across different regions. By 1951, a single national standard, Bharati Braille, was established. This standardization was crucial for creating a uniform system that could be used across the country. The standardization of Bharati Braille has made it easier for visually impaired individuals to access educational materials, official documents, and literature in their native languages. This inclusivity has played a significant role in their educational, social and economic integration. The development of new technologies, such as Braille translation software and Braille production devices, has further enhanced the accessibility and usability of Bharati Braille.

National Institute for Visually Handicapped - NIVH (Now, National Institute for the Empowerment of Persons with Visual Disabilities) was evolved from National Centre for the Blind in 1979 and activities related to Braille development were also taken up by the Institute. Braille Development Unit was also set up in the institute to undertake the developmental activities related to Braille. A supervisory body to oversee and enhance Braille development in India, the Braille Council of India (BCI) was established in the institute in 2008.

Rules of Transcription

1. All punctuation marks that appear in print are represented by their corresponding Braille symbols.
2. To indicate a new paragraph, the content should start in the third Braille cell of a new line. When it's important to save space, three blank spaces can be left within a line to signal the start of a new paragraph. If a paragraph ends at the last Braille cell of a line, the next paragraph should begin in the fourth Braille cell of the following line.
3. According to standard practice, the maximum number of Braille cells in a line should be used. To achieve this, words can be split between pages if necessary. Compound words can be divided at any syllable. When breaking a word at the end of a line, it should be divided between appropriate syllables. There should be no space left between the last syllable and the Hyphen (-) sign Dot 36 (⠤) that follows. A hyphen should never be placed at the beginning of a new line.
4. Dot 236 (⠨⠠) signifies the start of a standard quotation ("), while Dot 356 (⠨⠠⠨) indicates its end ("). For inner quotations, two-space lower sign Dot 6, Dot 236 (⠨⠠⠨) is used to open ('), and Dot 356, Dot 3 (⠨⠠⠨⠨) is used to close ('). In printed text, the sequence of quotation marks may occasionally be reversed, but in Braille, single-space signs always represent outer quotation marks, and two-cell signs represent inner quotation marks.
5. When in ink print, a number or a letter is preceded or followed by a symbol or abbreviation of coinage, weight, measure or other special signs, corresponding Braille symbols or abbreviation, without the abbreviation point or plural, should be used and it may always be placed immediately before the letter or number to which it refers.
6. The fraction line is denoted by Dot 34 (⠨⠠) and is used to separate the numerator from the denominator. In a mixed number, the fraction is connected to the whole number with a Hyphen Dot 36 (⠤), and the number sign Dot 3456 (⠨⠠⠨⠠) is not placed before the fraction. The fraction should not be carried over to the start of a new line.
7. To represent an asterisk (*) in Braille, use Dot 35 (⠨⠠⠨) twice without spaces. This can also stand for other reference symbols found in print. Leave a space before and after the asterisk. When paired with a footnote number, do not leave a space between the asterisk and the number. If asterisks appear within a printed line, use ellipses in Braille to indicate presumed omissions. For breaks in the text marked by a series of asterisks, use three asterisks centered on a line, separated by a single space.
8. When passages in languages that use a script different from the Indian

language being used appear, the following practice may be followed: For passages with more than three words in a foreign language, two cell signs Dot 2, 2 (⠠⠠) should be placed before the first word and a single Dot 2 (⠠) before the last word. For passages with three words or less, each word should have a single Dot 2 (⠠) before it. Foreign language contractions are generally not used, except in grammars and dictionaries.

9. A word or words underscored in print indicating stress may be placed within the two cell signs Dots 236 and 356 (⠠⠠). Three/Four cell lower signs may be employed when underscored words are already placed within outer or inner quotations.
10. To open and close parentheses or brackets (), Dot 2356 (⠠) is used. No space should be left before or after the bracket. When enclosing a part of a word in parentheses or brackets, the standard practice used in print should be followed.
11. Typically, there is no space before or after the Braille dash represented by Dots 36, 36 (⠤⠤). If there is no space at the end of a line, the dash can be written at the beginning of the next line preceded by a word from the previous line. However, the compound sign, which includes the colon and dash, should not be split at the end of a line. In Braille, a long dash is generally handled the same way as in print.
12. Abbreviations that are commonly used in print should also be used in Braille, adhering to the print text. Abbreviations made up of the initial letters of a person's name, an organization, or an institution, and not using abbreviation points in print, should be written in Braille preceded by the letter sign Dot 56 (⠠).
13. In Braille, the colon sign (:) is represented by Dot 25 (⠠) and is used to denote specific points in time, separating hours, minutes, and seconds. The number sign Dot 3456 (⠼) is not repeated.
14. The oblique stroke or bar (/) is represented by Dot 34 (⠠) and is used whenever it appears in print, except in dates. When dates are written with the month, day, or year separated by an oblique stroke, hyphen, or full stop in print, the corresponding numbers in Braille are separated by Hyphen Dot 36 (⠤), with only one number sign Dot 3456 (⠼) preceding the entire sequence.
15. In general literature, the common mathematical operation signs for addition, subtraction, multiplication, division, and equality should always be written out in words. The specialized mathematical symbols should be reserved for use in mathematics and scientific texts only.
16. Every line of poetry should start in the first cell of a new Braille line. If a line of poetry is too long to fit on one Braille line, it should be continued in the third cell of a new line. Leave a blank line before and after each stanza. To

save space, poetry can be written as prose, with each stanza beginning in the third Braille cell of a new line and three blank cells between poetic lines. If a poetic line does not end within a Braille line, the final word should be carried over to the next Braille line. This approach should also be used when poetry appears within prose. Dot A blank Braille line should be left before and after the poetic passage. In case of a poetry line in prose, the poetry sign 345, 345 is to be used at the beginning (with space after poetry sign) and at the end of the poetry line 345 is to be used without space.

17. In Braille, a series of dots in print is represented by using Dot 3 (⠠) three times, forming an ellipsis sign. This sign should be written with one space before and after its cell and may be punctuated as a word depending on the context. When dots indicate the omission of letters within words, an equivalent number of Dot 2 (⠠) should be used without spacing. If the ellipses signify the omission of a complete paragraph, they should be treated as a separate paragraph.
18. Halant (⠨) should be inserted prior to the consonant which it is affecting.
19. If word starts with a 'vowel' then consider the entered braille symbol as a 'vowel' and not as a 'matra'. Example: आई, इकाइयां, इलेक्ट्रॉन।
20. If a 'vowel' comes immediately after a consonant then it represents a 'Matra' and not a vowel. Example: बाइबल, भालू, पानी, नीति, रूई।
21. If the previous character entry was a 'vowel' or a 'matra', consider the current entry to be a vowel. Example : आई, इकाइयां, बुआ, बहनोई, जमाई।
22. Insertion of vowel: like लखनऊ and भालू (नऊ and लू). It depends on the user whether they wish to insert a 'matra' or vowel after a consonant. If the user wants to add a vowel then after inserting consonant, dot1 should be inserted, and then the braille symbol for the vowel, otherwise a 'matra' will be inserted.
23. हलन्त dot 4 will always be added before the consent for eg: धर्म is written as dot 2346, 4, 1235, 134.
24. Dot 1 or अ will inserted whenever a स्वर अक्षर will immediately comes after the consonant for eg: गई is written as dot 1245, 1, 35.
25. Whichever character has nukta we will add dot 5 before the consonant eg. ज्ञ to be written in braille as dot 5, 245.
26. When there is both a halant and a nukta in a word, the halant (dot 4 in braille) will be place before the nukta for eg. ज्यादा to be written as dot 4, 5, 245, 13456, 345, 145, 345.
27. To denote different phonetic symbols of a phoneme, the respective vowels and consonants should be preceded by Dot No. 5 in each language.
28. To write footnotes in Braille the following suitable methods should be used:

- a) Short notes of seven words or less should be inserted in the text following the word or words which they refer, should be enclosed in Brackets.
- b) Long and or copious notes should be placed at the end of the volume in which they occur with reference to them. In the text being indicted by consecutively numbered asterisk are inserted in the text beginning with one for each volume immediately the following text. The note section should begin from a new page headed by note. In the note section, each note number, without an asterisk should begin in the first cell of new line followed by the page and line number of the Braille text where the corresponding reference occurs, followed by the note itself. If a note requires more than one Braille line, all successive line should be indented three spaces.
- c) If the notes are short or few in number, they may be written at the foot of the page in paragraph form separated from general text by a row of dots 25 (::) or an asterisk (*) preceded and followed by a space should be inserted in the appropriate place in the text and repeated before the note at the bottom of the page. In case of more than one footnote to be placed at the foot of the same Braille page, the notes should be numbered in order beginning with one for new Braille page and the asterisk at the foot of reference in the text should be followed by the appropriate number without a space, although a space should be left between the number and the following word.
- d) Notes may also be placed at the end of the paragraph where this method is applied, an asterisk should be inserted at the point of reference and the notes written in the paragraph within brackets with asterisk be repeated beginning inside the opening bracket. If there is more than one in the same paragraph, each asterisk in the text should be followed by the appropriate note number and the number should be repeated at the beginning of the note itself. The lower sign Dots 56 (::) denotes the letter sign in Braille. The letter sign is used before a letter or letters when it is required to distinguish between the letter meaning and the number, a word, whole word contraction or an abbreviated word. The letter sign is needed when:
 - i. Any letter of the alphabet follows a number or is separated by a Hyphen following a number.
 - ii. A letter which means a letter standing alone is not followed by an abbreviation point indicating an abbreviation.
 - iii. A combination of letters standing alone could be confused with an abbreviated word.
 - iv. A letter is joined by a Hyphen to a word or number which follows it.

(Letters which mean letter should be preceded only by a letter sign with all parenthesise or quotation marks should be omitted, even though they are used in Ink print.)

Tables from the next page are being presented in sequence of unicode table. They are not being arrange as per alphabatical series/flow.

For English, mathematics and science, prevailing Nemeth Codes and corresponding rules to be applicable.

This booklet includes Bharati Braille as per Grade 1 and therefore, contraction codes for Bharati Braille have not been included in this booklet.

Remarks:

- To denote different phonetic symbols of a phoneme, the respective vowels and consonants should be preceded by Dot No. 5. eg. To denote the phonetic sound of Ka and Ga of Urdu Dot No. 1 and 3(Ka) and Dot No. 1, 2, 4 and 5 (Ga) should be preceded by Dot No. 5 in Hindi.
- For Hindi/Sanskrit/Marathi/Nepali फ़, dot No. 1, 2 and 4 to be used. This will in the symmetry with phonetic sound of English F. Earlier, dot No. 2, 3 and 5 was being used in Hindi.
- For denoting different phonetic sound of vowel A, it was recommended that Dot No. 1 should be preceded by Dot No. 5.
- Nukta letters will be denoted by preceding Dot 5 (ः).
- For Marathi, to clarify the confusion between avagraha and comma could best be resolved by continuing the comma sign with dot 2. In the case of avagrahas however, a minimum of 2 consecutive dot 2 may be used. More dot 2"s may be inserted in case of requiring more emphasis.
- For Nepali, the small „ree" to be symbolised by dot 5, 1235.
- Numbers will be written by preceding Dots 3456(ः) (Number sign) before English alphabets A to J in sequence.
- For Sanskrit, GVANG (गङ्ग) (॥) to be symbolised by dots 5, 346 (ःः).
- For Sanskrit (ॐ), जिह्वामूलीय तथा उपध्मानीय to be symbolised by dots 5 (ः).

Remarks:

- Instead of using Dot No. 6 to precede a letter for denoting difference in the phonetic sound as suggested by the group, Dot No. 5 should be used to ensure uniformity.
- Nukta letters will be denoted by preceding Dot 5 (ः).
- Numbers will be written by preceding Dots 3456 (ःः) (Number sign) before English alphabets A to J in sequence.
- Dot 4 will be used as ADAK. eg. for लङ्गा, dots 123, 4, 245, 345 will be used.

Remarks:

- The letters (rh) and (la) exists in Halegannada (Ancient Kannada) text even now. Students studying major Kannada will come across those letters. Their phonetics is different and have a separate letters in Kannada written text. It was recommended to use dots 2, 5, 1,2,3 and 5 for (rh) and dot 5- 4,5 and 6 for (la) may be recommended to be used.
- For Kannada letter GYA (ಘ) with unicode 0C9C, 0CCD, 0C9E in Brialle, Dots 156 (⋮) to be used
- For Kannada letter FA (ಫ) with unicode 0CAB, 0CBC in Brialle, Dots 5,124 (⋮⋮) to be used
- For Kannada letter ZA (ಞ) with unicode 0C9C, 0CBC in Brialle, Dots 5,245 (⋮⋮) to be used
- Nukta letters will be denoted by preceding Dot 5 (⋮).
- Numbers will be written by preceding Dots 3456(⋮) (Number sign) before English alphabets A to J in sequence.

90.	0D17, 0D4D, 0D2F		ജ്ഞ	4, 245, 25	⠠⠠⠠⠠
91.	0D19, 0D4D, 0D15		ഒ	4, 346, 13	⠠⠠⠠⠠

Remarks:

- The Malayalam Language, three letters such as „IRRU“ that is Dot 6 in one cell and 1,2,3 and 5 in next cell, „ILU “and „ILUU“ that is dot 5 in one cell and 1,2 and 3 in the next cell, dot 6 in one cell and 1,2 and 3 in the next cell may be kept aside from Malayalam Braille since those letters are not used in Malayalam from 1970 onwards.
- Dot 6 visargam is not largely used in Malayalam print nowadays but is used in some parts of Kerala hence it may be allowed to be continued.
- Nukta letters will be denoted by preceding Dot 5 (⠠).
- Numbers will be written by preceding Dots 3456(⠠) (Number sign) before English alphabets A to J in sequence.
- Braille code number 3 and braille code number 4 are used as virama sign in malayalam in different ways. Dot 4 is used to form coplex letter. Example ക്ക [0D15, 0D4D, 0D15] braille dots 4,13,13. Dot 3 is used when virama 04D4 at the end of a word.Example ക്ക [0D15, 0D4D, 0D15, 0D4D] braille dots 4,13,13,3.

77.	0B6C	ORIYA DIGIT SIX	୬	3456, 124	:::
78.	0B6D	ORIYA DIGIT SEVEN	୭	3456, 1245	:::
79.	0B6E	ORIYA DIGIT EIGHT	୮	3456, 125	:::
80.	0B6F	ORIYA DIGIT NINE	୯	3456, 24	:::
Additional consonant					
81.	0B15, 0B4D, 0B37		କ୍ଷ or କ୍ଷ	12345	::
82.	0B1C, 0B4D, 0B1E		ଜ୍ଞ or ଜ୍ଞ	156	::
83.	0B5C	ORIYA LETTER RRA	ୠ	12456	::
84.	0B5D	ORIYA LETTER RHA	ୡ	5, 12456	:::

Remarks:

- For Odiya language, the use of dot 3 for „Apostrophe” was clashing and confusing with „Chandrabindu”. Hence, Dot „2”, will be use instead of dot „3” for Apostrophe.
- Further for sandhi words in Oriya language containing half- „a” it is suggested to use dot 5.
- Nukta letters will be denoted by preceding Dot 5 (::).
- Numbers will be written by preceding Dots 3456(::) (Number sign) before English alphabets A to J in sequence.

Tamil Unicode along with Bharati Braille Codes for Tamil Language
